Education

- **Savitribai Phule Pune University** *Aug. 2020 - Ongoing*
Bachelor of Science in Information Technology
Aggregate CGPA: 7.14
- **Shree Chatrapati Shivaji Maharaj College Omerga** *Jul. 2018 - May 2020*
HSC
Percentage: 69.23%

Skills

Operating Systems:	Windows, LINUX
Languages:	Python, Java
Database:	My SQL
Tools:	AWS, Jenkins, Kubernetes, Anisible, Docker, Gi

Projects

Infant Cry Analysis

- Infant cry analysis is the study of the sounds babies make when they cry. By examining the pitch, duration, and other features of their cries, researchers and healthcare professionals can learn about the baby's health, development, and needs. This helps in early detection of health issues, understanding developmental milestones, identifying hunger or discomfort, and monitoring the baby's well-being over time. It also leads to the development of tools to assist parents in understanding and responding to their baby's cries better.
